PSYCHOLOGY

THE
RIGHT
WAY **R**

Approaches

The idea that psychology as a distinct branch of study is generally dated at around 1880 when the first experimental lab was established. The philosophical roots of psychology stretch back much earlier than that. In this unit we will describe the work of the first ever experimental psychologist, as well as chart the emergence of psychology as a scientific discipline. Likewise, within this unit we will explore different approaches within psychology, this includes; behaviourist, cognitive and humanistic approach.

VOCABULARY: Introspection, structuralism, classical/operant conditioning, vicarious reinforcement, social learning, genotype, phenotype, schema, self-actualisation, congruence, tripartite, defence mechanisms, idiographic, nomothetic, reductionist, deterministic
