### Biopsychology

Year 12

Biopsychology is the study of psychology from the perspective of the underlying biology (i.e. it's the biological approach from the approaches topic). But where the approaches section focused mainly on genetics, this biopsychology section drills down more into the physiology and biochemistry underlying behaviour. This topic builds on your Biology knowledge from GCSE and is a great way to understand human behaviour.

**VOCABULARY:** Autonomic, Somatic Neurons, Synaptic Transmission, Lobe, Commissurotomy, Plasticity, Temporal Resolution, Spatial Resolution, Infradian, Ultradian, Endogenous, Exogeneous, Melatonin
